

BEYOND MIGRATION

Stories of Transformation and Enduring Impact

DuPont Retires 17 SAP Legacy Systems in Record Time with JiVS IMP and Accenture

Powered by Data Migration International's JiVS IMP platform, this joint success delivered substantial cost savings, agility, and compliance at global scale—all within just 12 months.

**A FRAGMENTED
LEGACY
LANDSCAPE
BLOCKING
TRANSFORMATION**

THE CHALLENGE

DuPont,

a Fortune 500 global science and innovation leader, has long stood at the forefront of transformative technologies spanning electronics, advanced materials, water solutions, and industrial applications.

Behind this cutting-edge product portfolio lies an IT landscape under immense pressure. Over the past decade, DuPont has undergone significant organizational shifts—including major mergers, divestitures, and, most recently, a revised plan to split into separate companies focused on Electronics and Specialty Products. These continual changes have created a complex and fragmented global IT environment. Each transition demands rigorous realignment of systems, data integration across business units, and full compliance with ever-evolving regulatory frameworks. For DuPont's IT teams, this meant maintaining aging legacy systems just for audit purposes—systems that were no longer adding strategic value.

THE LEGACY BURDEN: HIGH COSTS, HIGH RISK, LOW VALUE.

Among the most pressing challenges were DuPont's aging SAP legacy systems. These systems, once vital to operations, had become increasingly difficult—and expensive—to maintain. Beyond ballooning operational costs, they posed escalating cybersecurity and compliance risks. The burden was both financial and environmental: outdated hardware consumed unnecessary energy and drove up operational costs. Maintaining these systems purely for compliance was no longer sustainable—economically, operationally, or environmentally.

17 outdated SAP systems maintained solely for audit and compliance

Over 50 TB of historical data across decades

High operational and energy costs tied to outdated infrastructure

Rising security and compliance risks, especially with global ESG mandates

Urgent need to prepare for a corporate split into focused business units

THE SOLUTION

Application Retirement and Intelligent Archiving with JIVS IMP

To lead this ambitious effort, **DuPont** partnered with **Accenture** as the overall program integrator and turned to **Data Migration International (DMI)** for its proven technical solution, the **JIVS Information Management Platform (JIVS IMP)**.

**BEST-IN-CLASS
PARTNERSHIP WITH
ACCENTURE AND DMI**

Despite the massive scale, the project was **completed in just 12 months**—a timeline described by DMI as “unmatched in the industry,” where similar projects typically take two to four years.

As one stakeholder stated: *“I don’t think anybody else, with their approach and product, could have done what we did in 12 months.”*

What enabled this transformation was **JiVS IMP’s highly automated, scalable architecture.**

With **rapid data transfer capabilities** and a library of **over 2,000 preconfigured SAP business objects**, the platform ingested and archived more than **50 terabytes of legacy SAP data—including hundreds of ADK and archival files**—while preserving full business context and ensuring audit-readiness.

SCALE AND SPEED

THE RESULTS

Simpler, More
Cost-efficient,
and Compliant IT

Significant operating cost reduction

Massive complexity reduction of DuPont's IT landscape, reducing technical debt and streamlining global system architecture

Audit-proof compliance, with historical data fully accessible and secure — eliminating the need to maintain outdated infrastructure.

Significant gains in energy efficiency, eliminating the need for outdated hardware and cooling systems —**supporting DuPont's ESG and sustainability goals** by slashing IT-related emissions and energy waste

“This project was a textbook example of what’s possible through true partnership. Together with Accenture, we combined strategic leadership and technical precision to help DuPont retire 17 global SAP legacy systems in record time. Seamless collaboration, clear accountability, and mutual trust were key to delivering extraordinary results.”

Jean-Marc Pestoni
Head of North America Business, Data Migration
International

Is Your Organization Feeling the Strain of Legacy Systems?
