ZF DRIVES GLOBAL ERP SIMPLIFICATION: 80% SYSTEM REDUCTION & SAP S/4HANA SUCCESS WITH JIVS IMP

ZF Friedrichshafen AG, a global leader in driveline and chassis technology with operations across more than 30 countries, faced the monumental task of consolidating a fragmented ERP landscape comprising 38 QAD and 10 SAP ECC systems. With a strategic move toward SAP S/4HANA, ZF needed a solution to simplify migration, ensure long-term access to historical data, and accelerate transformation across regions—all while minimizing disruption and cost.

“The ZF project was a true showcase of how JiVS IMP can handle scale and complexity. We supported the transformation of 48 ERP systems with minimal business disruption—enabling ZF to cut data volume by 80% and fast-track their S/4HANA journey with clean, validated data. Seeing their migration factory in Poland scale up using our platform was a proud milestone.”

SITUATION

- Operation of worldwide QAD and SAP ERP systems
- Business distributed across the globe
- Central master data management with SAP MDG
- Consolidation and harmonization of ERP system landscape to SAP S/4HANA
- Historical data must be kept for long time
- Looking for a solution for migration and historization of 38 QAD and 10 SAP ECC systems

SOLUTION

- Selection of JiVS IMP for the transformation and historization of 38 QAD and 10 SAP ECC systems
- Providing data to the SAP Migration Cockpit
- Successful implementation of first project in 2023
- Start roll-out in 2024 with a ZF Implementation team in Poland (Migration Factory)
- Training and Coaching of the JiVS competence center by DMI

BENEFITS

-  **One solution for data migration, data cleansing, harmonization and retirement for SAP and non-SAP ERP systems**
-  **Risk-Mitigation and accelerated project throughput time**
-  **High transparency of data from Infor and no coding needed in JiVS IMP**
-  **Better data quality through validation of data and load via SAP Migration Cockpit**
-  **Cost-efficient approach by leveraging near-shore resources in Poland**
-  **Reduction of the number of ERP systems and the data ballast by approx. 80%**
-  **Access to historical data and documents**
