Germany

GISA MAKING THE DIGITAL SYSTEM LANDSCAPE FUTURE READY WITH JIVS IMP

GISA is a platform integrator and certified cloud service provider, offering the latest technologies and deep expertise in industry specific processes and challenges. GISA supports companies of all sizes with tailored solutions that ensure success today and tomorrow.

By using JiVS IMP, complex application landscapes are efficiently consolidated. The result: a legally compliant, lean, and strategically aligned IT infrastructure that minimizes risks and enables significant cost savings.

SITUATION

- Many legacy systems are no longer used productively but still needed for compliance, as they contain data and documents that must be preserved unchanged due to legal retention periods.
- Since information is closely tied to the respective applications, separation is technically complex and costly.
- This creates high demands for financial and personnel resources, while the protection of sensitive data and intellectual property often remains insufficient.

SOLUTION

- JiVS IMP extracts information from legacy systems unchanged and manages it in a legally compliant manner over its entire lifecycle.
- Historical data can be retained cost effectively, while outdated systems are decommissioned.
- Together with GISA as a consulting partner, organizations benefit from industry specific expertise and regulatory knowledge to implement a complete package for long-term IT modernization.

BENEFITS

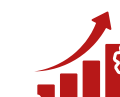

Retirement of outdated systems reduces costs significantly

Legally compliant, lifecycle based management of information

Lower business risks through secure archiving

Greater IT efficiency through consolidation of complex application landscapes

Future-ready IT environment supporting flexible, agile business processes
